

# TankPro System benefits

## Benefits for the Human Population

Kills, eliminates and prevents all water borne diseases, viruses, bacteria and other human harmful micro-organisms, lowering risk to human health. Drinking chlorinated water also improves human health and life expectancy. TankPro kills mosquitoes larvae, preventing them from breeding in the tank water reducing mosquito related diseases. Can quickly and easily provide, instant, clean, sterile water in disaster stricken areas (Hurricanes, Tsunamis, Tornadoes & Floods). There are no dangerous chlorine chemicals to purchase, handle, dose or store.

Environmentally Friendly  
Organically Maintained  
Renewable Resource  
Bio-degradable Energy

## Tank Benefits

Stops, kills and prevents algae growth in the tank water and on the inner walls. Kills and stops mosquito larvae forming, eliminating mosquito related diseases. Allows for less cleaning maintenance of the inner tank (removing & preventing algae). For best results TankPro benefits the water most effectively within a clean tank. This ensures many years of minimal maintenance. Reduces calcium build up on associated pipe work, fixtures and connected equipment. There is usually no alteration to the tank needed, or modification of pipes. Can aid and be safely used in conjunction with existing water filtration systems and water pumps.

## Agricultural Benefits

Provides clean, sterile water for animal livestock. Animals drinking clean sterile chlorinated water maintain better health, reducing vet visits and cutting vet bills. For chicken farms, far fewer 'egg seconds', a major cost saving. Within the Dairy industry Tankpro benefits the process of sterilization when used in conjunction with tank stored water reserves, aiding in the sterile cleaning process of equipment whilst maintaining healthy livestock when ingested.

## Environmental Benefits

The eco-friendly re-use of collected water with **NO added harmful man-made byproducts**. Recycles naturally occurring minerals from within the tanks water and converts them to a decisive chlorine biocide. With the added benefit of low power consumption & minimal running costs. TankPro may also be operated from solar powered panels or wind turbine power generation.

**Converts Naturally Occurring Minerals**  
from within the tank water to 100% available chlorine
